

HOW TO TWINE

the end of your handlebar tape

We use hemp twine, because it's strong, cheap, we *have* it, & we like the color. Whatever *you* use (there are dozens of options), make sure it's strong, and wrap tightly. Weak string will break in Step 6. See Step 5? Give yourself more to grab than shown, or wrap it around a pencil to help you grab. Shellac or glue over the twine to seal it in and make it nearly semi-permanent. Wrap tightly, go to town!
